EDUCATION

B.S. in Mechanical Engineering | Minors: Mathematics and Physics | Liberty University | Graduation: May 2027

GPA: 3.54 | Honors: Dean's List and Green Chord Scholar

Coursework: Dynamics, Engineering Economics, Fluid Dynamics, Heat Transfer, Materials Engineering, Mechanics of Materials, Mechatronics, Physics II, Statics, Thermal Fluids Design Lab, and Thermodynamics II.

PROFESSIONAL SKILLS

- Software: ANSYS, AutoCAD, Bambu Studio, Blender, HTML, JavaScript, Fusion 360, FVD++, MATLAB, Microsoft Office (Word, Excel, PowerPoint), DirectSOFT6 (PLC Ladder Logic), SolidWorks, and Smartsheet.
- Certifications: Certified SolidWorks Associate (CSWA)

WORK EXPERIENCE

HandyTube, Quality Engineering Intern, Camden, Delaware

Summer 2025

- Accomplished improved production compliance and operator training effectiveness, as measured by more consistent manufacturing processes, by developing and revising standardized work instructions, visual work instructions, and training materials for aerospace manufacturing processes across all machines within the facility, correcting and standardizing over 300 outdated or inconsistent documents.
- Accomplished reduced operational costs and improved process efficiency, as measured by approximately \$100K/month in cost savings, by designing and fabricating custom 3D-printed components in SolidWorks for ID Degreaser and Blowout machines and programming an automated soap titration system using DirectSOFT6 Ladder Logic PLCs, improving safety and process consistency.
- Accomplished improved capacity utilization and reduced downtime, as measured by identified downtime drivers, by conducting facility-wide safety audits and performing operational analysis of the FGT Straightener through field data collection.

Engineering Lab Tech, Liberty University, Lynchburg, VA

2025-Present

- Accomplished reliable 3D printing support for students, as measured by successful part production across multiple platforms, by operating Bambu Labs, UltiMaker, and ELEGOO 3D printers.
- Accomplished improved print success rates and reduced file errors, as measured by increased first-time print success, by assisting students with CAD model preparation and ensuring proper STL formatting and printability.
- Accomplished enhanced student proficiency in CAD and certification readiness, as measured by improved understanding of SolidWorks concepts and exam preparation, by co-teaching the SolidWorks CSWA certification course and guiding students through key modeling skills.

ENGINEERING COMPETITION TEAMS

Theme Park Engineering – Design Team Lead and Project Manager

[\[LinkedIn\]](#) | [\[GitHub\]](#) | 2024-Present

- Accomplished development of a safe and manufacturable ride system, as measured by a functional pendulum ride design for the 2025 Ride Engineering Competition, by modeling and assembling the gondola, seating, and lap restraint system in SolidWorks with emphasis on safety and manufacturability.
- Accomplished successful leadership and integration of a complex roller coaster, as measured by coordinated subteam progress and completion of a cohesive roller coaster design, by serving as Design Team Lead and Project Manager for the 2026 Ride Engineering Competition, overseeing research, concept development, scheduling, sponsorship acquisition, and industry partnerships.
- Accomplished validation of structural integrity and rider safety, as measured by accurate G-force and load calculations aligned with ASTM standards, by running FEA simulations in SolidWorks and ANSYS and performing detailed force analysis in MATLAB.

Formula SAE – Suspension and Powertrain Engineer

[\[LinkedIn\]](#) | [\[GitHub\]](#) | 2025-2026

- Accomplished detailed powertrain system representation, as measured by accurate CAD models of critical components, by designing and modeling crankshaft, transmission input/output, friction and steel disks, clutch basket, and drivetrain pump in SolidWorks.
- Accomplished functional suspension system design, as measured by complete and manufacturable component models, by designing steering shaft and heave damper sensor attachment in SolidWorks.
- Accomplished improved performance evaluation capability, as measured by clear data-driven insights and visualizations, by importing tire analysis data into MagicTyre using MATLAB and generating plots for analysis.
